

# Naval Repair Rouen

HAROPA PORT has 3 times more assets... The complementarity of the three ports is evident in the services and facilities offered by HAROPA PORT in ship repair: port specificities in Le Havre and Rouen, river specificities all along the Seine Axis up to the Portes de Paris.

## Diversified equipment, providing a range of knowledge

The Port of Rouen has its own Naval Repair Centre located alongside the quayside in Croisset, downstream of the city of Rouen.

As a dredger owner itself, the Port of Rouen handles commercial requests from internal and external customers (cruise lines, private companies operating on the Seine axis, tugs, pushers, private individuals, etc.)

Complete and efficient, the Naval Repair Centre consists of 4 professional workshops served by a shipping line quay:

- › mechanical workshop,,
- › boiler-making and piping workshop,
- › electricity workshop,
- › carpentry-painting workshop.

## The floating dock: a tool that can be adapted to different work sites

Integrated into the ISO 9001 certification perimeter, the floating dock is accessible to vessels up to 10,000 tonnes.

Capable of accommodating vessels up to 140 m long (dredgers, cruise ships, etc), this facility can also handle the simultaneous maintenance of six smaller units (pilot, pusher, launch or barge types).

Up to 150 expert workers can work there simultaneously.

# An efficient and responsive Naval Repair Centre at your service

## Shipping line dock

Located in a zone sheltered from the wind and equipped with a mobile tower crane, the shipping line dock faces the mechanical and boiler workshops. An effective additional asset in the event of urgent interventions.

## Mechanical workshop

Mechanical specialists at your service: mechanical fitters, diesel mechanics, engine mechanics, hydraulics experts, shipping mechanics, factory workers, supervisors.

## Boilermaking workshop

All the skills in the field of naval boilermaking can be brought into play: boilermaking, locksmithing, piping, welding (our welders are qualified EN 287-1 by Bureau Véritas).

## Electricity workshop

The workshop officers apply the rules specific to the "merchant marine" sector and comply with the rules of Bureau Véritas and Maritime and River Affairs. In particular, they carry out electromechanics and automation repairs.

□

## Carpentry and painting workshop

---

Our professionals work both in the field of naval carpentry (inhabited premises of ships, floors, linings) and in the "land" field (various premises of buildings).

## Additional services

---

Possibility of providing specialized companies, belonging to our network of subcontractors:

- › fairing paint
- › scaffolding services
- › electronic and automatic interventions
- › maintenance of whaling ships, etc.

# A quality approach recognized by our customers

The organization of the Naval Repair Centre, integrated into the workshops and dredging service of the Port of Rouen, is ISO 9001-certified for the maintenance activities of boats and dredgers, and industrial repairs.
